DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-7, 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ghanadan et al. (US 6,259,319) (hereinafter Ghanadan) in view of Carney et al. (US 5,937,011) (hereinafter Carney).

Regarding claim 1, Ghanadan discloses the claimed subject matter in claim 1 including "sampling the output of a" "amplifier radio frequency signal; and detecting the sampled signal" "and quantizing and nulling the intermodulation distortion" in Figure 2, element 52; Figure 4; col. 1, line 54 to col. 3, line 48; col. 6, line 5 to col. 7, line 16. Ghanadan differs from the claimed invention in that it does not disclose "a multiple carrier linear amplifier". However, reducing intermodulation for amplifier in multi-carrier environment is not new and would have been perceived by one skilled in the art as intended use (Carney, col. 1, lines 39-41; col. 2, lines 52-54). Therefore, since multi-carrier is common within cellular technology, which is very popular, it would have been obvious to one skilled in the art to utilize method multi-carrier signaling of Carney into Ghanadan to maximize the utilization of Ghanadan system.

Regarding claims 2-7, these claimed subject matter are rather design specific, thus would have been obvious to one skilled in the art.

Application/Control Number: 09/820,146 Page 3

Art Unit: 2634

Regarding claim 23, see claim 1 above.

3. Claims 8-22, 24, 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ghanada in view of Carney as applied to claim 23 above, and further in view of Myer (US 6,157,254).

Regarding claim 24, the combination of Ghanada and Carney discloses all the claimed subject matter in claim 24, as stated above, except for the claimed subject matter "wherein said detector and digitizing circuit further comprises a sample and hold circuit". Myer, in the same field of endeavor, discloses the use of "a sample and hold circuit" is optional (col. 2, lines 36-37).

Regarding claim 25, based on the above combination, it would have been desired to provide oscillator signal in Figure 2, element 52 of Ghanada at the appropriate frequencies of the subjective signal band for mixing. Thus, the claimed subject matter "a synthesizer circuit for generating a local oscillator signal having predetermined frequency increments $f_0 \dots f_i$ situated within one of predetermined subbands and a mixer for mixing the sampled radio frequency signal with the local oscillator signal and targeting the centers of multiple carriers" would have been obvious to one skilled in the art.

Regarding claims 8, 16, see claim 25 above.

Regarding claims 9-15, 17-22, these claimed subject matter are rather design specific, thus would have been obvious to one skilled in the art.

Conclusion

Application/Control Number: 09/820,146

Art Unit: 2634

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Morgan (US 6,525,603) discloses Feedforward Amplifier Linearization Adapting Off Modulation.

Mitzlaff (US 5,912,586) discloses Feed Forward Amplifier With Digital Intermodulation Control.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dac V. Ha whose telephone number is 571-273-3040. The examiner can normally be reached on 5/4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 571-272-3056. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
